

Definition/Description:

Population aged 12 and over who report having a disability or being limited in certain activities on a continuing basis (at least 6 months) because of a physical condition, mental condition, or health problem.

Source:

Statistics Canada, Canadian Community Health Survey Cycle 1.1, 2001

Findings:

Population Reporting an Activity Limitation

	Sex	Geography	Per Cent	Low 95%	High 95%
				confidence interval - per cent	confidence interval - per cent
Activity Limitation Reported	Both	Canada	22.9	22.6	23.3
		Manitoba	21.0	19.7	22.4
		Winnipeg Health Region	19.6	17.5	21.6
	Female	Canada	25.1	24.6	25.6
		Manitoba	23.3	21.4	25.2
		Winnipeg Health Region	22.8	19.9	25.6
	Male	Canada	20.7	20.2	21.1
		Manitoba	18.7	17.1	20.3
		Winnipeg Health Region	16.2	13.7	18.7

Highlights:

- Of the WHR population, 19.6% reported experiencing an activity limitation. This percentage is lower than both the Manitoba (21.0%) and Canada (22.9%) values.
- A larger percentage of females (22.8%) in the WHR reported activity limitations compared to males (16.2%). This result is similar for Manitoba and Canada where the percentage of females reporting activity limitation was larger than for males.
