

GP & Specialist Vists by Location per 1000 Residents

CHA REPORT 2004

Definition/Description:

Location of Visits to GP/FPs

Where visits to General Practitioners/Family Practitioners (GPs/FPs) took place. Shows the percentage of all visits by regional residents that occurred within their RHA district, or outside their RHA, or in Winnipeg. Only a small percentage of visits occur outside of province (see methodology).

Location of Visits to Specialists

Where visits to specialist physicians took place. Shows the percentage of all visits by regional residents that occurred within their RHA district, or outside their RHA, or in Winnipeg.

Methodology:

Overall Physician Utilization Analyses:

Physician analyses used 1995/96 and 2000/01 claims data. Data were restricted to ambulatory visits for in-province services by Manitoba physicians. Visits to physicians practicing outside of Manitoba were excluded after analysis revealed that such visits accounted for less than 1% of all visits provided to Manitoba residents.

Location of ambulatory visits: GPs/FPs and Specialists

The denominator was total ambulatory visits, and proportions (not rates) were calculated. Physician location was assigned to one of four categories: (1) within the individual's district of residence; (2) outside the district of residence, but within RHA of residence; (3) Outside RHA of residence: non-Winnipeg; and (4) in Winnipeg.

Highlights:

Location of Visits to GP/FPs

- The majority of Winnipeg residents visit GP/FPs in Winnipeg.
- The RHAs with the closest proximity to Winnipeg appear to have the highest proportions of residents that visit Winnipeg GP/FPs, these are : Interlake RHA, North Eastman RHA, South Eastman RHA, and Central RHA (based upon 2000/01 data).
- In the province of Manitoba, the majority of residents do visit GP/FPs within their health district, however this percentage most likely reflects the pattern for Winnipeg residents.

Location of Visits to Specialists

- The majority of Winnipeg residents visit specialists in Winnipeg.
- The proportion of non-Winnipeg RHA residents who visit Winnipeg specialists varies substantially among the RHAs, from 13.7% in Brandon RHA to 92.6% of visits in North Eastman RHA.
- Those in the Rural South are slightly less likely than those in the North to visit Winnipeg specialists.
