Seven Oaks

The **Seven Oaks community area (CA)** is comprised of three neighbourhood clusters: Seven Oaks West (08A), East (08B), and North (08C).

Our Health. **Our Community**

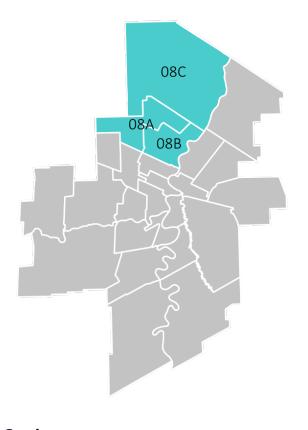

Introduction

The Community Area Profile is a snapshot of the 2019 Community Health Assessment (CHA), which provides information about the health of our population (for example, health status, health disparities, determinants of health and health services utilization). Each CA profile offers the healthcare system, social services, community development, support agencies and others, valuable insight into the health of the communities they serve. The information presented in the CA profiles can help to guide the way services are designed, determine which services are offered in communities and neighbourhoods, identify how community partners can work together to provide better support and services to their community members, and determine how to best meet the identified needs of the community area.

Where does the data come from?

The data included in the CA profiles are obtained from multiple sources including: Administrative Health and Surveillance Data, Canadian Community Health Survey, 2016 Canada Census, and Healthy Child Manitoba. It is important to note that different data sources, such as the ones used in this report, collect data using different time periods. For that reason, not all indicators in this profile are reported using the same time periods.

Areas of Strength and Areas for Improvement

This page illustrates health indicators that saw the most statistically significant changes over time. 'Areas of Strength' are health indicators that have improved ("now") compared to the last reported time period ("then") within the community area, and 'Areas for Improvement' are health indicators that have worsened compared to the last reported time period.

Areas of Strength

Areas for Improvement

Male life expectancy increased over time

Fewer residents were living with osteoporosis

More children were living with asthma

More residents were living with hypertension

Fewer residents were hospitalized or died due to a heart attack (per 1,000)

Teen pregnancy rates decreased over time (per 1,000)

More residents were living with diabetes

More residents were newly diagnosed with diabetes

(per 100 person years)

Fewer residents had lower limb amputations due to diabetes over time

More residents were living with total respiratory morbidity

Who lives in Seven Oaks?

A brief overview of the community area's population by age and sex, demographic information, life expectancy at birth, as well as mortality. The Seven Oaks community area is comprised of three neighbourhood clusters: Seven Oaks West (08A), East (08B), and North (08C). The comparator, the Winnipeg Health Region (WHR), comprises Winnipeg, East St. Paul, West St. Paul, and Churchill.

Population (2018): 80,030 residents

Summary of Key Health Indicators

This page highlights two measures:

Trend: How key indicators have changed in the community since the last reported time period.

vs MB: How those key indicators compare to the Manitoba average.

Chronic Diseases and Illnesses

Cardiovascular	Trend	vs MB
Hypertension prevalence	WORSE	WORSE
Ischemic heart disease prevalence	SIMILAR	WORSE
Heart attack rate	BETTER	SIMILAR
Congestive heart failure prevalence	SIMILAR	SIMILAR
Stroke rate	SIMILAR	WORSE

Diabetes		
Diabetes incidence	WORSE	WORSE
Diabetes prevalence	WORSE	WORSE
Lower limb amputation prevalence	BETTER	BETTER

Respiratory		
Total respiratory morbidity rate	WORSE	WORSE
Asthma prevalence for children	WORSE	WORSE

Musculoskeletal		
Osteoporosis prevalence	BETTER	SIMILAR
Arthritis prevalence	SIMILAR	SIMILAR

Mental illness		
Benzodiazepine overprescribing – community	BETTER	SIMILAR
Antidepressant prescription follow-up	SIMILAR	SIMILAR
Suicide rate	SIMILAR	SIMILAR

Injury		
Unintentional injury hospitalization rate	SIMILAR	BETTER

Social Determinants of Health

This section highlights social determinants of health (SDOH), or "systematic social and economic conditions that influence a person's health". They include education, income, employment, housing, early childhood development, and health behaviours that can have a significant impact on individual and population health.

Education (Statistics Canada Census 2016)	Community avg.	WHR avg.
Educational attainment - % of residents (aged 15+) who have high school diploma or higher	81% (81 - 82%)	83%

Healthy Child Development (readiness for school learning) (HCMO 2019)						
Kindergarten children vulnerable in the:	Physical health and well-being domain	12.0% (3.6 - 14.6%)	15.1%			
	Social performance domain	12.6% (3.6 - 14.4%)	12.6%			
	Emotional maturity domain	12.8% (5.5 - 14.3%)	14.9%			
	Language and cognitive domain	14.7% (5.5 - 16.3%)	14.4%			
	Communication & general knowledge domain	16.1% (3.6 - 17.1%)	17.6%			

Income (Statistics Canada Census 2016)		
Median household income after tax	\$64,328 (\$60,589 - \$89,932)	\$59,510
Low Income Measure-After Tax (LIM-AT)	13% (4 - 14%)	16%
Proportion of children (aged 0-17) living in low income families	19.2% (2.7 - 22.8%)	22.6%

Employment (Statistics Canada Census 2016)				
Unemployment rate (aged 15+)	6.1% (4.2 - 6.5%)	6.5%		
Labour force participation (aged 15+)	67.3% (66.4 - 68.5%)	67.1%		

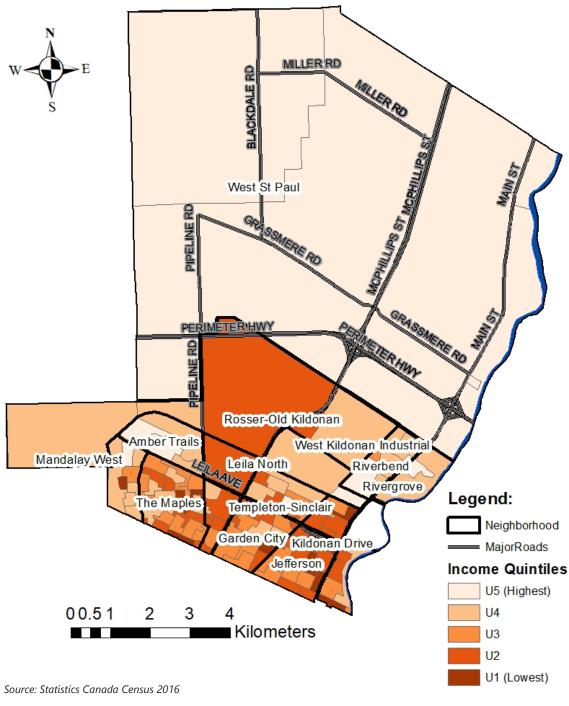

Housing (Statistics Canada Census 2016)		
Housing affordability (spending more than 30% of total before-tax income on housing)	36% tenant (31 - 44%)	40% tenant
	13% owner (10 - 15%)	12% owner

Health Behaviours (MCHP Mental Illness Among Adult Manitobans 2018)		
Substance use disorders	No CA level-data (3.3 - 5.1%)	5.6%

Boundaries & Income Quintiles Map

This map of the **Seven Oaks community area** highlights income quintiles for each neighbourhood. The map also highlights main roads to show the boundaries for the community area.

Seven Oaks Community Area

Map: Created by Population and Public Health Unit, WRHA, September 2020

At-a-Glance of Selected Indicators

Compares the health of people in the community area or in each neighbourhood cluster to the health of Winnipeg Health Region residents and Manitobans overall.

Select Definitions

Inadequate prenatal care: determined by the number of physician visits received by a prospective mother, considering when the first prenatal visit took place. A prenatal visit is defined as a visit to a health professional (e.g., physician, mid-wife, or nurse practitioner) where medical or healthcare was performed to take care of the pregnancy.

Families First Risk factors: three or more of the following risk factors identified as leading to poor childhood outcomes: 1) maternal alcohol use; 2) maternal smoking; 3) mother with less than high school education; 4) financial difficulties; 5) maternal depression and/or anxiety; 6) number of screens.

Potentially avoidable deaths: The average annual rate of avoidable deaths before age 75, per 1,000 population, over a five-year time period. Avoidable deaths include those that could be avoided through primary prevention efforts, such as lifestyle modifications, immunizations and health promotion initiatives.

Community Area Profiles were developed by the George & Fay Yee Centre for Healthcare Innovation's (CHI) Evaluation Platform.

The authors wish to acknowledge the contribution of many individuals who assisted in the development of this report. We greatly appreciate the support and guidance provided by the Community Area Facilitators and members of the Community Area Profile Advisory Committee throughout the production of this profile. We also wish to extend a sincere thanks to CHI's Knowledge Translation team for designing the layout of the report and to the Population and Public Health Unit (WRHA) for creating the community area maps.
