## The Epidemiology of Communicable Diseases in the Winnipeg Health Region

Population Health Surveillance Team  
Population and Public Health  
Program, WRHA

## ACKNOWLEDGEMENTS

This report details the descriptive epidemiology of select communicable diseases in the Winnipeg Health Region. Special gratitude is extended to the following individuals:

- Public Health Nurses: investigation and management of reportable communicable diseases, including detailed collection of and entry of surveillance data within iPHIS.
- Communicable Disease Coordinators: public health nursing leadership: direction and oversight regarding the collection of surveillance data
- Medical Officer of Health/Team Manager: public health clinical leadership and oversight

## FOR FURTHER INFORMATION

## THE WINNIPEG HEALTH REGION (WHR)

- The largest health region in the province of Manitoba with a population of 778,746 in 2017, more than half of the total provincial population.
- Includes the capital city of Winnipeg, and the rural municipalities of East St. Paul and West St. Paul.
- For planning and management purposes, the WHR is divided into 12 community areas.
- The Winnipeg Regional Health Authority (WRHA) is responsible for the delivery of acute care, public health and other community services to the residents of the WHR.
- In 2012, the Churchill Health Region became an operating division of the WRHA; however, residents of Churchill are not included in this surveillance report.

## EXECUTIVE SUMMARY

This report, *The epidemiology of communicable diseases in the Winnipeg Health Region 2013-2018*, provides a regional surveillance summary of select infections/diseases listed as reportable under *The Manitoba Public Health Act* (with the exception of influenza, tuberculosis, and sexually transmitted and blood-borne infections as they are reported elsewhere).

The report is divided into four broad disease categories (i) Enteric, food, and waterborne diseases (ii) Respiratory and direct contact diseases (iii) Vaccine preventable diseases and (iv) Vectorborne and zoonotic diseases. Within each section, diseases are presented separately with the type of analysis based on the number of cases reported in 2018. As this is a technical surveillance report, results are limited to statistical tabulations by age, sex, and geographical data.

This report contains the most current description of the broad patterns of communicable diseases in the Winnipeg Health Region and is intended to provide evidence to inform the planning of programs and policies for prevention.

## INTRODUCTION

This report focuses on communicable diseases and infections that are notifiable in Manitoba under *The Public Health Act*<sup>1</sup> (with the exception of influenza, tuberculosis, and sexually transmitted and blood-borne infections, which are reported elsewhere). Communicable diseases (CD) are investigated and managed by a team of Public Health Nurses, Public Health Inspectors, Communicable Disease Coordinators and Medical Officers of Health/Team Managers, and analyzed by Population Health Surveillance epidemiologists, with the primary goal of reducing the transmission and spread of CDs, and ensuring public safety.

As the prevention, treatment, and management of communicable diseases remains a priority for the Winnipeg Regional Health Authority (WRHA), epidemiologic information at the regional level is essential for program and planning purposes. Therefore, this report provides the most up-to-date information available on the descriptive epidemiology of select communicable diseases in the Winnipeg Health Region (WHR).

---

<sup>1</sup> <http://www.gov.mb.ca/health/publichealth/act.html>

## METHODS

### **DATA SOURCE AND CASE DEFINITIONS**

Case definitions, reporting requirements and guidelines for case management and contact investigation are outlined in the provincial disease management protocols<sup>2</sup>. Laboratory and clinical case reports are submitted by laboratories and health care providers to Manitoba Health; and subsequently referred to Regional Health Authorities for follow-up. Upon receipt of a referral, and for the duration of follow-up, regional public health nurses collect standardized case and contact information through client interviews, and by reviewing hospital and laboratory records. Information collected on each client includes sociodemographic information (e.g., birth date, gender, address of residence) as well as clinical information (e.g., results of microbial testing). Data are entered into the regional public health information system (iPHIS), a Web-based application that facilitates charting of information on patients with select notifiable communicable diseases (Appendix A) among residents of the WHR or for clients whose care is managed by the WHR.

---

<sup>2</sup>

## **INCLUSION/EXCLUSION CRITERIA**

All confirmed cases of select notifiable communicable diseases reported among residents of the WHR at the time of diagnosis between January 1, 2013 and December 31, 2018 were included in the analysis.

Anaplasmosis and Babesiosis were added to *The Public Health Act* on January 1, 2015 and as such only have four years of data available. Blastomycosis only has three years of data available due to inconsistencies in referral patterns prior to 2016. Due to changes in surveillance practice, data for Streptococcal Invasive Disease (Group A) and Streptococcal Invasive Disease of the Newborn (Group B) are only available for 2018.

Cases with unknown gender (n=0) and those with a missing or invalid postal code (n=25) were excluded.

## **VARIABLE DEFINITIONS**

Infections were assigned to a calendar year based on *epidate* (defined as the earliest of specimen collection date and date reported to public health). Age of the client at the time of infection was defined using birth date and *epidate*, and age groups were assigned based on standard convention. Infections were assigned to community areas (CAs) using postal code of residence at time of testing

and the 2018 Manitoba postal code conversion file.

## **STATISTICAL METHODS**

Annual crude rates of communicable diseases were calculated using the corresponding year's mid-point WHR population as the denominator. Population data were derived from the Manitoba Health Insurance Registry and provided (in electronic format) by Manitoba Health.

Rates were directly age-standardized to the 2006 Canadian population (provided by Statistics Canada) and 95% confidence intervals were calculated using the Tiwari et al.<sup>3</sup> formula. All analyses, including mapping, were completed using StataMP 13 (StataCorp, College Station, TX).

Population data were assessed using the WHRA Population Health Surveillance Data Disclosure Protocol. No equivalence class in this report contained fewer than the required denominator threshold of 1000 individuals, so no numerator adjustment was needed. However, diseases with *less than or equal to 5 cases* reported in 2018 were not analyzed in detail; total case counts for these diseases were included in Table 1, and within overall

---

<sup>3</sup> Tiwari RC, Clegg LX, Zou Z. Efficient interval estimation for age-adjusted cancer rates. *Stat Methods Med Res.* 2006;15:547-569.

case counts where applicable (such as under category totals). For diseases with *less than or equal to 15 cases* reported in 2018 graphical analysis was not completed and standardized rates were not calculated as small case counts may result in unstable rates and decrease the usefulness of any comparisons within or between groups.

### ***LIMITATIONS***

There are a number of limitations to consider when interpreting the findings. The surveillance data used for this analysis do not permit exploration of populations defined by factors other than geography, age, and sex. As a result, analyses exploring other variables such as education, income, or behavioural risk factors could not be readily undertaken.

Due to different standardization methods and the choice of standard populations, age-standardized rates may differ from other published reports. Rates for single years by small geographic areas can result in rates being calculated based on a small number of cases. These rates are unstable and should be interpreted with caution. Rates may be influenced by changes in testing practices and patterns over time. Sharp increases in rates in a time period may be due to disease outbreaks, which are not highlighted in this report.

The number of reported cases is a fraction of the actual count as it is limited to those individuals who seek medical attention and who have samples submitted for testing.

Despite these limitations, this report provides timely, important and quantifiable insights into select communicable diseases in the WHR population to inform the planning of programs and policies for prevention.

## RESULTS

**TABLE 1: Number and crude rate of cases, select reportable diseases, WHR, 2013-2018**

Category	Disease	2018		2013-2017	
		No.	Crude Rate	No.	Crude Rate
<b>Enteric, Food, and Waterborne Diseases</b>	Amebiasis	5	0.6	89	2.4
	Campylobacteriosis	85	10.9	294	7.8
	Cryptosporidiosis	11	1.4	67	1.8
	Giardiasis	29	3.7	284	7.5
	Listeriosis, invasive disease	1	-	9	0.2
	Salmonellosis	122	15.7	584	15.5
	Shigellosis	7	0.9	55	1.5
	Typhoid Fever	7	0.9	21	0.6
	Verotoxigenic <i>E.coli</i> infection	11	1.4	74	2.0
<b>Respiratory and Direct Contact Diseases</b>	Blastomycosis	7	0.9	16	0.4
	Meningococcal Invasive Disease	2	0.3	10	0.3
	Legionellosis	1	-	7	0.2
	Pneumococcal Disease, Invasive	133	17.1	302	8.0
	Streptococcal Invasive Disease (Group A)	17	2.2	-	-
	Streptococcal Invasive Disease of the Newborn (Group B)	3	-	-	-
<b>Vaccine Preventable Diseases</b>	Diphtheria	1	-	10	0.3
	Haemophilus influenzae non-Serotype B Invasive Disease	14	1.8	31	0.8
	Hepatitis A	3	-	31	0.8
	Hepatitis B, Acute	26	3.3	42	1.1
	Mumps	103	13.2	250	6.6
	Pertussis	1	-	59	1.6
<b>Vectorborne and Zoonotic Diseases</b>	Anaplasmosis	6	0.8	11	0.3
	Lyme Disease	26	3.3	69	1.8
	Malaria	11	1.4	73	1.9
	West Nile Virus	5	0.6	15	0.4

*Reportable diseases with zero cases in 2018 are not included in this report*

*Rates were not calculated for cell counts less than 5; rate denominator is 100,000 people*

## ENTERIC, FOOD, AND WATERBORNE DISEASES

This section of the report provides an overview of select diseases that enter the body as a result of eating or drinking contaminated foods or liquids and result in gastrointestinal infection or intoxication. A total of 1,791 cases fell in this category between 2013 and 2018, with the highest infection rates in the Downtown (50.5/100,000 people) and River Heights (48.5/100,000 people) community areas (Figure 1; Table 2).

**FIGURE 1: Age-standardized rates (per 100,000 people), enteric, food, and waterborne diseases, by community area, WHR (2013-2018)**

**TABLE 2: Frequency, crude and age-standardized rates (per 100,000 people), enteric, food, and waterborne diseases, by community area, WHR (2013-2018)**

	Number	Crude Rate	Age-Standardized Rate	95%CI
<b>Community area</b>				
St. James	133	36.4	37.4	31.2 - 44.4
Assiniboine South	86	40.5	40.4	32.0 - 50.3
Fort Garry	248	45.5	45.8	40.3 - 51.9

## RESPIRATORY AND DIRECT CONTACT DISEASES

This section of the report provides an overview of select diseases transmitted by direct contact or respiratory routes. A total of 520 cases fell under this category in the WHR between 2013 and 2018 representing a standardized rate of 10.9/100,000 people. The highest infection rates were observed in the Point Douglas (33.3/100,000 people) and Downtown (28.3/100,000 people) community areas (Figure 16; Table 24).

## VACCINE PREVENTABLE DISEASES

This section of the report provides an overview of select diseases that are preventable by routine immunization. A total of 550 cases fell under this category between 2013 and 2018 in the WHR. The highest rates were observed in the Point Douglas (27.4/100,000 people) and Downtown (16.9/100,000 people) community areas (Figure 22; Table 33).

**FIGURE 22: Age-standardized rates (per 100,000 people), vaccine preventable diseases, by community area, WHR (2013-2018)**

## VECTORBORNE AND ZOONOTIC DISEASES

This section of the report provides an overview of select diseases transmitted by insects and animals. A total of 231 cases fell under this category in the WHR between 2013 and 2018 representing a standardized rate of 5.0/100,000 people. The highest infection rates were observed in the St. Boniface (8.4/100,000 people) and Assiniboine South (7.4/100,000 people) community areas (Figure 33; Table 48).

## LYME DISEASE

FIGURE 34: Age-standardized rates (per 100,000 people), Lyme, WHR (2013-2018)

*Rates are directly age-standardized to the 2006 Canadian Census population*

**TABLE 51: Frequency, crude and age-standardized rates (per 100,000 people), Lyme, WHR (2013-2018)**

**a) Total**

	Number	Crude Rate	Age - Standardized Rate	95%CI
2013	11	1.5	1.4	0.7 - 2.5
2014	14	1.9	1.8	1.0 - 3.1
2015	12	1.6	1.6	0.8 - 2.8
2016	17	2.2	2.1	1.2 - 3.4
2017	15	1.9	1.8	1.0 - 3.0
2018	26	3.3	3.1	2.0 - 4.6
Total	95	2.1	2.0	1.6 - 2.4

**b) Females**

	Number	Crude Rate	Age - Standardized Rate	95%CI
2013	6	1.6	1.5	0.5 - 3.3
2014	2	0.5	0.5	0.1 - 1.9
2015	1	0.3	0.3	0.0 - 1.5
2016	6	1.5	1.6	0.6 - 3.4
2017	2	0.5	0.4	0.1 - 1.7
2018	10	2.5	2.4	1.1 - 4.5
Total	27	1.2	1.1	0.7 - 1.6

**c) Males**

	Number	Crude Rate	Age - Standardized Rate	95%CI
2013	5	1.4	1.4	0.4 - 3.3
2014	12	3.3	3.3	1.7 - 5.8
2015	11	3.0	2.9	1.5 - 5.3
2016	11	2.9	2.7	1.3 - 4.9
2017	13	3.4	3.3	1.7 - 5.6
2018	16	4.2	4.0	2.3 - 6.5
Total	68	3.0	2.9	2.3 - 3.7

## APPENDICES

### APPENDIX A – Common and technical names of reportable diseases under *The Manitoba Public Health Act*

Common name	Scientific or technical name of disease or its infectious agent	Included	Rational for exclusion
AIDS	Acquired Immunodeficiency syndrome	X	Not captured in iPHIS
Amebiasis	<i>Entamoeba histolytica</i>	√	
Anaplasmosis (human granulocytic anaplasmosis)	<i>Anaplasma phagocytophilum</i>	√	
Anthrax	<i>Bacillus anthracis</i>	√	
Babesiosis	<i>Babesia</i> species	√	
Benign tumour of the brain or central nervous system	Benign tumour of the brain or central nervous system	X	Not captured in iPHIS
Blastomycosis	<i>Blastomyces dermatitidis</i>	√	
Botulism	<i>Clostridium botulinum</i>	√	
Brucellosis	<i>Brucella</i> species	√	
Campylobacteriosis	<i>Campylobacter</i> species	√	
Cancer or malignant neoplasm	Cancer or malignant neoplasm	X	Not captured in iPHIS
Chancroid	<i>Haemophilus ducreyi</i>	X	Not captured in iPHIS
Chlamydia	<i>Chlamydia trachomatis</i> (including LGV)	X	Not captured in iPHIS
Cholera	<i>Vibrio cholerae</i> , subgroup O1 O139 or other toxigenic only	√	
<i>Clostridium difficile</i> associated diarrhea	<i>Clostridium difficile</i> toxin	X	Not captured in iPHIS
Congenital Rubella Infection/Syndrome	Rubella virus	√	
Creutzfeldt - Jakob Disease, Classic and Variant	Creutzfeldt - Jakob Disease prion	√	
Cryptosporidiosis	Cryptosporidium species	√	
Cyclospora	<i>Cyclospora cayetanensis</i>	√	
Diphtheria	toxin - producing <i>Corynebacterium</i> species: <i>Diphtheriae</i> , <i>ulcerans</i> , <i>pseudotuberculosis</i>	√	
Giardiasis	<i>Giardia lamblia</i> , <i>intestinalis</i> , <i>duodenalis</i>	√	
Gonorrhea	<i>Neisseria gonorrhoea</i>	X	Not captured in iPHIS
+ <i>Haemophilus influenzae</i>	<i>Haemophilus influenzae</i>	√	

Common name	Scientific or technical name of disease or its infectious agent	Included	Rational for exclusion
Serotype B Invasive Disease	(serotype B)		
+ <i>Haemophilus influenzae</i> non - Serotype B Invasive Disease	<i>Haemophilus influenzae</i> (non serotype B)	√	
Hantavirus Pulmonary Syndrome	Hantavirus	√	
Hepatitis A	Hepatitis A virus	√	
Hepatitis B	Hepatitis B virus	√	
Hepatitis C	Hepatitis C virus	X	Not captured in iPHIS
HIV	Human Immunodeficiency virus	X	Not captured in iPHIS
Influenza, Laboratory Confirmed	Influenza virus	X	Reported elsewhere
Legionellosis	<i>Legionella</i> species	√	
Leprosy	<i>Mycobacterium leprae</i>	√	
Listeriosis invasive disease	<i>Listeria monocytogenes</i> in normally sterile tissue	√	
Lyme Disease	<i>Borrelia burgdorferi</i>	√	
Malaria	<i>Plasmodium</i> species	√	
Measles	Measles virus	√	
Meningococcal invasive disease	<i>Neisseria meningitidis</i>	√	
Mumps	Mumps virus	√	
Pertussis	<i>Bordetella pertussis</i>	√	
Plague	<i>Yersinia pestis</i>	√	
Pneumococcal Disease, Invasive	<i>Streptococcus pneumoniae</i>	√	
Poliomyelitis	Poliovirus	√	
Q fever	<i>Coxiella burnetii</i>	√	
Rabies	Rabies virus	√	
Rubella	Rubella virus	√	
Salmonellosis	<i>Salmonella</i> species, excluding <i>S. typhi</i>	√	
Severe Acute Respiratory Infection (SARI)	Severe Acute Respiratory Infection	√	
Shigellosis	<i>Shigella</i> species	√	
Smallpox	Variola major & minor virus	√	
Streptococcal Invasive Disease (Group A)	<i>Streptococcus pyogenes</i>	√	
Streptococcal Invasive Disease of the newborn (Group B)	<i>Streptococcus agalactiae</i>	√	
Syphilis (All categories)	<i>Treponema pallidum pallidum</i>	X	Not captured in iPHIS
Tetanus	<i>Clostridium tetani</i>	√	
Tuberculosis	<i>Mycobacterium</i>	X	Reported

Common name	Scientific or technical name of disease or its infectious agent	Included	Rational for exclusion
	<i>tuberculosis, africanum, canetti, caprae, microti, pinnipedi, bovis</i>		elsewhere
Tularemia	<i>Francisella tularensis</i>	√	
Typhoid Fever	<i>Salmonella typhi</i>	√	
Verotoxigenic <i>Escherichia coli</i> infection	Verotoxin - producing strains of <i>E.coli</i>	√	
Viral Hemorrhagic Fever	Crimean Congo, Lassa, Ebola, Marburg, Rift Valley	√	
West Nile Virus (WNV)	West Nile Virus	√	
Yellow Fever	Yellow Fever Virus	√
